Flame Retardant Heavy-Duty Air Filters

NAPA Filters now offers a line of flame retardant products (FR) that provide an excellent alternative to their standard counterparts. These filters are engineered to provide the same great performance and protection as the standard (non-FR) version with the added benefit of self-extinguishing media.

This new product is ideal for use in vehicles called into fire service support where the risk of exposure to ignition sources, such as hot embers, is increased. Equipment used near welding operations will also benefit from the added protection offered by this product.

When exposed to a temporary ignition source, the media is designed to self-extinguish and resist flame flare up, as the ignition source is cooled or removed.

Cataloged using the (FR) designation, these specialty filters provide additional protection for heavy and extreme use applications.

Part Number	General Applications
2033FR	CAT, John Deere
2253FR	Ag-Chem,(Inner Element 2254)
2276FR	Various HD Applications (Inner Element 2456 or 6263)
