Self-Venting Fuel Filters

NAPA Filters is proud to introduce optional Self-venting fuel filters for many popular applications. These filters incorporate our QuickVent™ technology that allows for easy draining of water, key in easier serviceability. The QuickVent™ patented design eliminates the need to loosen the filter to drain water. QuickVent™ allows for faster water drain times, cleaner water draining, and less fuel spillage. A variety of different sizes and applications are now offered for both medium and heavy-duty applications.

Below is a list of some standard NAPA Filters part numbers matched to their new QuickVent™ optional offerings.
