## Open Bottom Fuel/Water Separators

NAPA Fuel/Water Separators, catalog numbers 3630, 3812, 3813, 3774, 3969 have undergone a design change. The previously used plastic endcaps have been replaced with metal endcaps. The primary driver for this change is the NAPA commitment to provide products that evolve with the Original Equipment designs as well as with new and changing applications. This change allows the filter to fit new applications while continuing to provide excellent performance for all currently cataloged applications.

Along with the changes to diesel and Biodiesel fuels have also come the need for more stringent control of water contamination. The newer fuel blends have a much greater propensity to attract water content making proper fuel filtration more important than ever before. NAPA Fuel/Water Separators effectively remove solid and water contaminants from your fuel allowing proper atomization to take place. Keeping your system's fuel clean and free from water contamination is one of the key requirements for engine performance and fuel efficiency.

**Chemically enhanced cellulose media with superior water separating and coalescing capability.**

For questions or more information please contact your local NAPA Filters District Manager or call Product Information at 1.800.949.6698
